

PM54

3 in 1 connectivity solution

Secure communications for any network device
Industry first innovation

- ✓ Ideal for jobs with no fixed network or where you need reliable remote access
- ✓ Full remote configuration online via Permaconn's Atlas portal
- ✓ Easy to install and manage
- ✓ Generate additional recurring income from add-on services

High Speed 4G Router

Wifi Hotspot

Alarm communicator

PERMACONN™
The leader in wireless security

The PM54's alarm, router and hotspot features work simultaneously and can easily be powered from the alarm panel

Highly Flexible Networking

The PM54 is a fully featured router with WiFi. It can connect to the internet via your clients' network (wired or wirelessly) or via 4G LTE. Any network-ready device (e.g. NVR, server, IP camera) can connect to the PM54 via ethernet or WiFi.

Great for CCTV

The PM54 is ideal for CCTV jobs where a fixed line network is unavailable, or when you are unable to open ports on the client's network. Plus we now have a remote health-checking service for CCTV (in partnership with CheckMyCCTV) that automatically detects faults and notifies you before they become critical.

Managed Router

The PM54 is a polled device that maintains a constant connection with our servers. Full remote configuration of router settings can be performed via Atlas at any time (over 4G or IP). It will even report when your client's network is unavailable, and provide them with a fall-back network.

Secure Remote Access

The PM54 provides a secure pathway for remote access. Permaconn provides DDNS and VPN options to access network devices connected to the PM54. These can be easily be configured remotely via the Atlas portal.

Easy and Compatible

Installation is plug and play with remote configuration via IP/ 4G using Atlas. As an alarm Communicator the PM54 is compatible with all major brands including the latest IP-only models. Remote panel programming (Upload/ Download) is available for all popular panels including the Bosch 2000/ 3000 series.

Recurring Income

Generate new recurring income streams from additional services for your customers including 4G data packs and licences for our automated remote health-checking service for CCTV (CheckMyCCTV).

Available 4G Data Packs	Data Pack	DP-500MB	DP-1GB	DP-5GB	DP-10GB
	Monthly Data Allowance	500 MB	1,024 MB	5,120 MB	10,240 MB
